

My project library can download from <https://github.com/lxneng/xpinyin>.

First use clone to copy this library from this link then use "pip install xpinyin" to install this library.

Second run "tstl pinyin.tstl --nocover", after you produce the sut.py you need to open this file and add "# _*_ coding: utf-8 _*_ " before the first line.

Third run the test "python randomtester.py --nocover".
