Instruction of Project

CS562

Chao Zhang

Prof Groce Alex

This is the part 2 of the project, I just test the check length and the check insert. For this test, the source file is the LinkedList_Circular.py, this file need the LinkedList_Double.py and LinkedList_single.py. So I put all those files in the folder called part 2. My test have 100 integer data. To run the test, you just need to put all files in the same folder and use the command

tstl mytstlfile.tstl

python randomtester.py –nocover

This test may need a second to start because it has 100 integer data.
